Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
 - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
 - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
 - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

1. Claims 1-20 are presented for examination.

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1, 8, and 15, it is not clear how the generated fold-status information is used.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1, 5, 8, 12, 15, and 19 are rejected under 35 U.S.C. 102(e) as being anticipated by Koppala et al, U.S. Patent No. 6,237,086, submitted by the applicant.

Koppala et al teaches the invention as claimed in claims 1 and 5 including an instruction handling system for determining instruction folding (1950) comprising:

- (a) at least one fold decoder associated with an instruction fetch buffer stack (1920),
- (b) the at least one fold decoder coupled to a set of successive entries within the instruction fetch buffer stack and examining contents within the successive entries prior to a main decode of the contents within the successive entries to determine whether the successive entries contain two or more instructions which may be folded (col. 20, line 65),
- (c) the at least one fold decoder generating fold status information for the contents within the successive entries indicating whether the successive entries contain two or more instructions which may be folded (col. 20, line 15), and
- (d) wherein the at least one fold decoder checks the contents within the successive entries for instructions of a variable size and for possible folding of a variable number of instructions (col. 16, line 28; col. 20, line 16) – claim 5.

The processor claims 8 and 12 including the fetch buffer and the decoder (320) and the method claims 15 and 19 are equivalently rejected based on the same reason.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Chang et al taught an apparatus for folding a plurality of instructions.

Cho et al taught an extended instruction word folding apparatus.

O'Conner et al taught a method of folding instructions for a stack based machine.
